

## Risk Management Services

Risk Management Indonesia was founded in 1985 as a wholly-owned subsidiary of IBS Group, to develop and deliver a broad range of risk management services for our diversified customer base. A dedicated and specialist service that was not previously available in Indonesia.

Risk Management, as a discipline, is concerned with the application of multi-faceted techniques for the identification, assessment, control and finance of risk associated with a company's operations. A company's risk profile will normally include physical, financial, legal and operational risks, which may or may not be fully transferable, and the Risk Management program must be practically tailored to work efficiently within the company's commercial realities.

IBS Risk Management Services offers a broad range of experience and expertise in this area, and works closely with the IBS Risk Services team to interface comprehensive insurance protection around our clients' risk management programs.
