

Construction

Over the past 25 years, IBS Group has acted as insurance broker and risk manager to some of Indonesia's largest infrastructure and private sector projects, including placement of complex insurance programs for major power & utility facilities, infrastructure works, large private & public sector building projects and leading integrated pulp and paper and other manufacturing facilities.

IBS Construction Group provides risk and insurance consultancy services to sponsors, lenders and public sector bodies, including detailed risk matrices, risk transfer alternatives and drafting of financial security clauses such as loss payee, non-cancellation and policy inefficacy conditions. We also provide risk management consultancy services on projects for both IBS Group clients and third parties.

Equipment and Motor

IBS Equipment and Motor Group is dedicated to the unique insurance and risk management needs of major plant and equipment operators in the mining, forestry and construction industries in Indonesia. We also work alongside some of the country's largest motor fleet owners and operators, providing tailored insurance coverage and advice on preventive maintenance programs, service standards, warranty management, plant testing and component replacement regimes, in order to minimize the overall cost of financing risk in line with clients' defined cost control strategies.

We design insurance solutions aligned to financing options for leasing, hire purchase and plant rental, providing innovative premium calculation structures such as burning cost, profit share or managed fund facilities, allied to specific risk management strategies, as a competitive alternative to traditional risk transfer.

Similar to CargoGuard, IBS Equipment and Motor Group provides IT-based solutions in the control and management of key fleet statistical information through FleetGuard, our internet-based management information system.
